FUTURE OUTLOOK OF MEAT GOAT INDUSTORY FOR THE U. S. SMALL FARMS

Sandra G. Solaiman, PhD, PAS

George Washington Carver Agicultural Experiment Station

The purpose of this paper is to assesct/rrent meat goat industry in the U.S. and to determine its future outlook. The datespented in this paper is drawn from four different sources—the U.S. 2000 Poption Census, the USDA 2002 Census of Agriculture, the USDA National Agricultural Statistic Service, and the USDA Foreign Agricultural Service. In the U.S. meant production has begaining popularity in recent years particularly because of awaing population of ethnic and faith-based groups who consume goat meat. The national estimates, based on import data only, indicate that the U.S. is mentan 750,000 head deficient/ineeting current demands for goat meat.

Goat Industry Profile in the U.S.

According to the 2006 USDA-NASS, the \$J.goat population is almost 3 million heads. Goat numbers increased 100% ually from 1985 to 2006. More than 82% of goats in the U.S. are meat goats, 10% aims departs and 8% are fiber goats (Figure 1, Table 1).

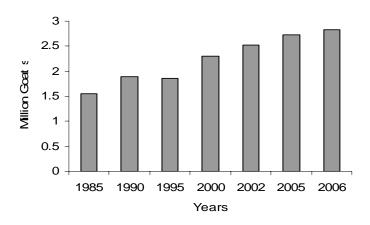

Figure 1. U.S. goat population changes from 1985 to 2006.

Table 1. Goat industry profile in the U.S.

	2002		2006*	Change	
	Number	%	Number	% %	of 2002
All goats	2,530,466	100	2,934,000	100	115.9
Meat goats	1,938,924	76.6	2,400,000	81.8	123.8
Milk goats	290,789	11.5	296,000	10.1	101.8
Fiber goats	300,756	11.9	238,000	8.1	79.1

^{*} Reflects USDA-NASS sample data.

Most of the goats in the U.S. are prodd in the South (Texs) and the Southeast (Tennessee, Georgia, Kentucky, North Claro, Florida and Alabama), the Midwest (Oklahoma, Missouri) and thWest (California). Morthan 44% of all goats are produced in the state of Texas alone. The breamof goats in the state of Texas is 1.3 million, up 9% from the 2002 USDA Census. More than 70% of the total goat population in the U.S. is produced in the top steates in goat numbers (Table 2). Many states experienced an isease in the goat numbers from the 2002 USDA Census. The state of Florida with 73,000 goat numbers sixpreced the highest gain (up 183%). The state of California claimed second place after and moved Tennessee to third place.

The state of Georgia claimed fourth placepassing Oklahoma. Missouri with more than 166% increase in goat population susped Kentucky, North Carolina and Alabama and claimed by place in the nation for goat production at the foliation of the foliation of goats in the nation.

Table 2. U.S. top ten states for numbers of all goats in 2006*

	All Goats	% of Total	% of 2002
U.S.	2,934,000	100	116
Texas California	1,300,000 133,000	44.3 4.5	109 129

Goat Meat Imports

In 2006, the U.S. imported more than 11,000 MT (metric ton) (nearly 25 million lbs.) of goat meat valued at \$41.8 million 1061% from 8,462 MT in 2003; its total value was up 194% from \$21.5 million in 2003. Howevepoat meat imports in 2006 were up 329% from 3,360 MT in 1999; its total laws was up 535% from \$7,850 million in 1999 (Table 4). The main exporters of goat meatine U.S. are Australia and New Zealand with 92.5% of the contribution coming from Atualia. As indicated by the Figures 2 and 3, there is a sharp increasegionat meat imports and dollars spent for goat meat. This trend will most probably continue unlesse the is an increase in domestic production. Imported goat meat prices increased physirom 2003 to 2006. According to the USDAFAS, price paid per lb. of imported goat meat in 2006 was \$1.72, up 50% from \$1.15 per lb. in 2003 and up 62% from \$1.06 per in 1999 (Table 4, Figure 3).

Table 4. U.S. Goat meat imports (MT) and its value (\$1000)

	1999	2003	2006*	% of 1999
Goat meat	3,360	8,462	11,070	329
Dollar Value	7,850	21,484	41,816	535
\$/lb	1.06	1.15	1.72	162

Goats Slaughtered in Inspected Plants

The number of all goats slaughtered atstate and federally-inspected plants in 2006 were nearly 750,000, up 2.5 folds from 0.990 eat goat slaughter numbers have shown a solid increase since 1990 (Table 5Faigure 4), and they likely will continue to increase due to trends in population growthat promote meat goat production. Meat goat industry in general is in its infancyette fore, many on-farm slaughters are probably not reported. It can be conjectured that every goat reported, there are at least 4 (estimated later in this report) that are requiorted. Also it must be noted that 2006 was the first year that goats alightered in the state inexpted units were reported.

Table 5. Goats (numbers) slaughterethatinspected plants in the U.S.

	1990	2006	% of 1990	% of 1990	
U.S. Federal	229,600	581,743	254		
Total Inspected		749,30	0*	326	

^a First reported year for non Federally inspected units.

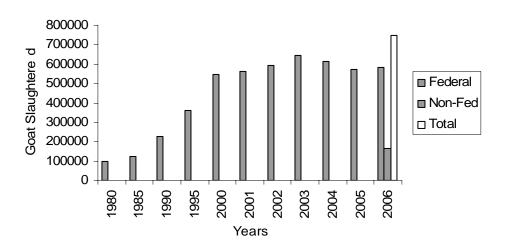

Figure 4. Goats slaughtered in federally astate inspected plants in the U.S.

Goat Consumption Based on Import and Slaughter Data

Goat consumption in the U.S can be estimated based on imported goat meat and slaughter data. Goats consumed in the dare nearly 1.5 million heads of goats annually. This represents an increase 500% from 2002 and over 320% increase from 1999. Total goats imported were estimateded on total goat meat import and an average carcass weight of 32.5 lbs. (65 lbs ivefweight is average slaughter weight reported by USDA). Goat consumption in the thick. So has increased steadily since 1999 and will likely continue to increase as the demalas growing (Figure 5). The sharmpor1e c we199ported we

or 25% of the population in the year 2050 (Teats). This group of immigrants has a strong preference for goat meat and willd ato the opportunity for this sector of agriculture to grow.

Table 6. Projections of total U.S. populatchanges by ethnic groups from 2000 to 2050

	2000	%	2005	%	2050	6
Total	281,421,90	6	295,507,000		419,854,000	
Asian	10,242,99	8 3.6	12,419,000	4.2	33,430,000	7.9
Black	34,658,19	0 12.3	38,056,000	12.9	61,361,000	14.6
Hispanio	35,305,81	8 12.5	41,801,000	14.1	102,560,000	24.4

U.S. Foreign Born Population

Changes in Ethnic and Faith-Based Populations in the U.S. Having Preference for Goat Meat

Although ethnicity and faith tradition undoubtedly overlap, as of 2000 over a million Buddhists and a million Muslims, over 10 million Asians and over 35 million Hispanics are reported as residing in the ULSS. Census, 2000). Again, this increase from 1990 to 2000 creates an opportunity for U.S. agriculture to produce new products to serve the food preferences of thiær-increasing population (Table 7).

Table 7. Percent changes in selected Ulmietand faith-based population changes from 1990 to 2005

	1990	2000	2005*	% change		
				1990-2000	2000-2005	
Muslims	0.53	1.1		109		
Buddhists	0.40	1.1		170		
Hispanics	22.4	35.3	42.7	58	21	
Asians	6.91	10.2	12.7	48	24	

^{*} Estimate, -- no data reported

ESTIMATED DEMAND FOR GOAT MEAT IN THE U.S.

The largest group of ethnic consumer spot meat is the Hispanics, with an increase of 57.94% in population from 19902000. Muslims, Asians and Africans also consume considerable amounts of goat meat consumption is steady except for special holidays when goat meat consumption is as 3 to 4 fold. There are increases in demand for goat meat for Easter, the 4thut and certain Muslim holidays such as

Estimating Population Having Preference for Goat Meat in the U.S.

An attempt will be made to estimate demand for goat meat based on Hispanic, Asian, foreign-born African and Caribbean populations in the U.S. Based on the U.S. Census Bureau (2005), there are about million Asians and about 41.8 million Hispanics in the U.S. Among an estimatemillion illegal immigrants (U.S. Census, 2000), over 90% are Mexican and other Latinericans that consume goat meat. There are almost three million foreign-born Caribbon and almost one million Africans in the U.S. In total there are about 62.4 million potential goat meat consumers in the U.S. (Table 8).

Estimating Goat Meat Consumption and Meat Goats Needed in the U.S.

The average number of persons livingaity. S. household is 2.59 (U.S. Census, 2000). For the ethnic population under coessition, a slightlyhigher number of 3 persons per household are usessuming conservatively thathly 10% of these ethnic households consume goat meat, a totalos million households may consume goat meat in the U.S. (Table 8). According to the Agriculture Fact Book (2001-2002), American consume on average annually 195 poolided meat and poultry per capita in the year 2000. If every ethnic household ree persons) consumes only 72 pounds of goat meat annually, including holidaysere will be a projected demand for 149.76 million pounds of goat meat. Assuming a 32.5-pound carcass weight per goat (according to the 2006 USDA-NASS, average weight of tosal aughtered in the federally inspected plants was 62 pounds) the total number of goesseled is 4.08 million per year (Table 8). This is a modest estimate of the number goats needed for the U.S.

Estimating the Numbers of Goats Processeon Private Establishments (Unaccounted)

Based on the import and slaughter data, more than 1.5 million goats were consumed in the U.S. in 2006. Undoubtedly, there are more meat goats consumed in the

U.S. that are not reported. The remination 2.58 million goats (4.08 million – 1.5 million) represent unaccounted numbers of

New Zealand have sharply increasence 1999. The U.S. has changed from a net exporter to a net importer during the laecalde. Increases in ethnic populations in the U.S., especially Hispanics, Asians and Muslimave contributed to this development. Also, goat meat is healthy meat and fits designer diets of healthouseious Americans. Goat production is a great opportunity for strifter producers in U.S. to target these markets and diversify their farm products. eTen is a great opportunity for value-added products. However, consumer as well ascharcer education is needed and marketing structure must be strengthened.
